          Pred. No. is the number of results predicted by chance to have a soore greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Score

Duncan M., Federspiel N., Hyman R., Kalman S., Komp C., Kurdi O.
Lew H., Lin D., Namath A., Oefner P., Schramm S., Davis R.W.;
Submitted (JAN-1997) to the EMBL/GenBank/DDBJ databases.
'- FUNCTION: INVOLVED IN COPPER TRANSPORT.
'- CATALYTIC ACTIVITY: ATP + H(2)O - ADP + ORTHOPHOSPHATE.
'- SUBCELLULAR LOCATION. Integral membrane protein (Potential).
'- SIMILARITY: BELONGS TO THE CATION TRANSPORT ATPASES FAMILY
(El-T2 ATPASES), SUBFAMILY IB.
'- SIMILARITY: CONTAINS 2 HMA DOMAINS.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        use by non-profit institutions as long as its content is in no modified and this statement is not removed. Vorhoelter F.J., Hernandez-Lucas I., Becker A., Cowie A., Gouzy J.,
Golding B., Puehler A.;
The complete sequence of the 1.683-kb pSymB megaplasmid from the N2-
fixing endosymbiont Sinorhizoblum meliloti.
From Natl. Acad. Sci. U.S.A. 98:9899-9894 (2001).
FOR NATL. Acad. Sci. U.S.A. 98:989-9894 (2001).
FUNCTION: INVOLVED IN COPPER TRANSPORT (BY SIMILARITY).
FUNCTION: INVOLVED IN COPPER TRANSPORT POTCHEN (BY SIMILARITY).
SUBCELLIJAR LOCATION: Integral membrane protein (By Similarity).
SUBCELIJAR LOCATION: THEGGRAPH POTCHEN (BY SIMILARITY).
EL-EZ ATPASES, SUBFAMILY IB.
EL-EZ ATPASES, SUBFAMILY IB.
SIMILARITY: CONTAINS 2 HMA DOMAINS.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               ATC2_RHIME

AAB37006 standard; peptide; 27 AΑ

AAB37006;

28-FEB-2001 (first entry)

Bcl2 polypeptide BH3 domain peptide #6.

Cytostatic: neuroprotective; anti-HIV; virucide; cerebroprotective; cardiant; Bcl-2 superfamily; BH3 domain; cell death agonist; Bad; apoptosis modulation; B cell lymphoma/leukemia 2; cancer; prostate; colorectal; gastric; non-small lung; renal; thyroid; neuroblastoma; lymphocytic leukemia; neurodegenerative disorder; AIDS; melanoma; lymphocytic leukemia; neurodegenerative disorder; AIDS; stroke; myocardial infarction

Homo sapiens.

W0200059526-A1

12-OCT-2000

06-APR-2000; 2000WO-US09352

07-APR-1999; 99US-0128202.

(UYJE-) UNIV JEFFERSON THOMAS

WPI; 2000-679325/66.

Huang Z,

Wang J,

zhang z,

Shan S,

Ľ 2;

New peptide conjugates for modulating apoptosis or for inhibiting B

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 (R-X). Peptide where n = 1-10; X = C=0. When the R-X group is attached to the N-terminus of the peptide, or a side chain of the peptide where CC when the R-X group is attached to the C-terminus of the peptide, or a side chain of the peptide, or a side chain of the peptide, or a side chain functional group of the side chain functional group is attached to the C-terminus of the peptide, or a side chain of the peptide, where the side chain functional group is coose or constant of the peptide, where the side chain functional group is coose or two double bonds, cyclobutyl, cyclopentyl, cyclohexyl optionally monosubstituted with a 1-5C straight or branched chain alkyl group, or benzyl optionally monosubstituted with a 1-5C straight or branched chain. CC of the peptide pertion of the conjugate. The peptides represent analogues of the peptide portion of the conjugate. The peptides represent analogues of a sel-2 superfamily polypeptide corresponding to amino acids 72-97 of the BH3 domain of the cell death agonist BAd. The peptide conjugate is subject, or for reversing B cell jumphoma/leukemia 2 (Bcl-2)-mediated blockage of function. In particular, the peptide conjugate is useful for treating a capital of the capture of the collocated blockage of cappetosis in cancer cells. It is also useful for inhibiting Bcl-2 conjugate and the peptide conjugate is useful for treating a subject afflicted with a cancer characterized by cancer cells that conjugate is useful for treating a subject afflicted with a cancer characterized by cancer cells that conjugate is useful for treating depoted to the peptide conjugate is useful for treating a conjugate is useful for treating a subject afflicted with a cancer characterized by cancer cells that conjugate is useful for treating depoted to the peptide conjugate is also useful for treating depoted to conjugate is also useful for treating depoted to conjugate is also useful for treating depoted to conjugate is also useful for treating depoted to conjugate is also useful for treating depoted t
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Query Match

The protein consists of first 78 amino acids of human BAX alpha, that includes the N-terminal region and BH3 domain. It lacks the BH1, BH2 and C-terminal transmembrane domains of the full-length BAX alpha. The tBAX protein lacking only the transmembrane domain has been shown to have anti-apoptotic activity. The present sequence is used to treat diseases associated with neuronal apoptosis, e.g. neurodegenerative diseases, peripheral nerve injury, spinal cord injury, head trauma and stroke.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              codon, resulting in a truncated protein. However, the domain responsible codon, resulting in a truncated protein. Bax (Bcl-2 associated x protein) is a proappototic member of the Bcl-2 gene family. CC Bax functions as a primary response gene in the p33-regulated apoptotic pathway. The Bax gene pomoter has 4 p33 binding sites and the capture of Bax is upregulated at the transcriptional level by p53, and CC Bax mRNA and protein expression have been shown to increase following induction of p53. Bax protein can function as a homodimer, or it can represent the capture of the capture of the capture of the capture of the capture of the capture of the capture of the capture of the capture of the capture of the capture of the capture of the capture of the capture of the capture of the capture of the capture of the capture of the capture of the capture of the capture of the capture of the capture of the capture of the capture of the capture of the capture of the capture of the capture of the capture of the capture of the capture of the capture of the capture of the capture of the capture of the capture of the capture of the capture of the capture of the capture of the capture of the capture of the capture of the capture of the capture of the capture of the capture of the capture of the capture of the capture of the capture of the capture of the capture of the capture of the capture of the capture of the capture of the capture of the capture of the capture of the capture of the capture of the capture of the capture of the capture of the capture of the capture of the capture of the capture of the capture of the capture of the capture of the capture of the capture of the capture of the capture of the capture of the capture of the capture of the capture of the capture of the capture of the capture of the capture of the capture of the capture of the capture of the capture of the capture of the capture of the capture of the capture of the capture of the capture of the capture of the capture of the capture of the capture of the
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Query Match

This sequence represents human Bax protein. Bax is a protein which is a socciated with the human bcl-2 alpha and beta proteins, the sequences of which are given in ARA7104-05 respectively. bcl-2 is encoded by a correct operation of the sequences of which are given in ARA7104-05 respectively. bcl-2 is encoded by a proto-oncogene and is capable of inhibiting appoptosis in many components of the second of the second of the second of the second of the second of the second of the second of the second of the second of the second of the second of the second of the second of the second of the second of the second of the second of the second of the second of the second of the second of the second of the second of the second of the second of the second of the second of the second of the second of the second of the second of the second of the second of the second of the second of the second of the second of the second of the second of the second of the second of the second of the second of the second of the second of the second of the second of the second of the second of the second of the second of the second of the second of the second of the second of the second of the second of the second of the second of the second of the second of the second of the second of the second of the second of the second of the second of the second of the second of the second of the second of the second of the second of the second of the second of the second of the second of the second of the second of the second of the second of the second of the second of the second of the second of the second of the second of the second of the second of the second of the second of the second of the second of the second of the second of the second of the second of the second of the second of the second of the second of the second of the second of the second of the second of the second of the second of the second of the second of the second of the second of the second of the second of the second of the second of the second of the second of the second of th
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Disclosure; Fig 3; 133pp; English

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           induction of $53. Bax protein can function as a homodimer, or it can heterodimerise with other Bc1-2 gene family members such as the antiapoptotic protein Bc1-2. Heterodimerisation of Bc1-2 family members provides a means of controlling cell death via the "rheostat" model. This model suggests that the relative amounts of Bc1-2 and Bax determine the susceptibility of a cell to undergo apoptosis. If Bc1-2 is in excess, Bc1-2/Bax heterodimers predominate and cell death is inhibited. If Bax is in excess, however, Bax homodimers predominate and the cell becomes susceptible to apoptosis following exposure to an apoptotic stimulus. Additionally, Bax can function in its monomeric form to accelerate cell death. Use of novel adenoviral vectors containing the Bax gene may augment and complement wild-type p53 gene therapy, which induces a G1 cell cycle arrest and/or apoptosis in malignant cells carrying p53 mutations.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Bax functions as a primary response gene in the p53-regulated apoptotic pathway. The Bax gene promoter has 4 p53 binding sites and the expression of Bax is upregulated at the transcriptional level by p53, an Bax mRNA and protein expression have been shown to increase following induction of p53. Bax protein can function as a homodimar
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 BH3 domain; cell death agonist; bcl homology domain; BCL-2 family, apoptosis promoter; cancer cell; virus infected cell; inflammation; autoantibody producing cell; cancer; lymphoprolliferative condition;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       This sequence represents human wild-type Bax protein. A naturally occurring mutant protein (AAV34149) was also isolated. Bax (Bcl-2 associated x protein) is a proapoptotic member of the Bcl-2 gene family.
                                                                                                                               07-OCT-1997;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         02-JUL-1999
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          AAY05435
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     mutations. In addition, Bax overexpression could provide the apoptotic effect of p53 without the need for p53 itself.

           Example 1; Columns 71-74; 105pp; English
                                DNA composition encoding bcl-2 two-hybrid and reporter system - for identifying modulators of bcl-2 function
                                                                                                                                                                                                                            05-JAN-1999
                                                                                                                                                                                                                                                                                                                                                  Homo sapiens
                                                                                                                                                                                                                                                                                                                                                                                                           A human Bcl-2 associated
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 The invention relates to a bcl homology domain 3 (HB3 domain), derived from a proapoptotic member of the BCL-2 family. The BH3 polypeptide can be used in a method for promoting apoptosis in a target cell, especially where the cell is a cancer cell a virus infected cel or an autoantibody producing cell. The BH3 polypeptide can be used in therapeutic compositions for treating disease including cancer, other lymphoproliferative conditions, arthritis, inflammation, and autoimmune diseases, which may result from the down regulation of cell death

The Bax protein is used in a composition which designated Bax are a boll-2 family member polypeptide. A naturally occurring Bax polypeptide and an antibody that binds to the Bax polypeptide. The composition is used to identify modulators of bc1-2-related function, e.g. substances that inhibit binding of Bax to bc1-2, which would be potentially useful as drugs for modulating
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Sequence
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  apoptosis

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 10-MAR-1999
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       AAW87809 standard; Protein; 192
                                                                                                          The present sequence represents a human Bcl-2 associated protein designated Bax. The Bax protein is used in a composition which designated Bax are bolled family member polypeptide. a naturally occurring Bax polypeptide and an antibody that binds to the Bax polypeptide. The composition is used to identify modulators of Bcl-2-related function, e.g. substances that inhibit binding of Bax to bcl-2, which would be potentially useful as drugs for modulating

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       AAY70827 standard; Protein; 192
                                                   The present sequence is a human BAX alpha protein, a pro-apoptotic protein which is a member of BCL-2 family of proteins that are involved in regulation of neuronal programmed cell death. The patent discloses specific truncated proteins derived from BAX alpha which inhibit neuronal apoptosis induced by trophic factor deprivation. The anti-apoptotic truncated BAX (tBAX) proteins include tBAX70, tBAX78 and their mutants. These proteins contain the N-terminal region and at least a portion of the BH3 domain of BAX alpha and lack the BH1, BH2 and C-terminal transmembrane domain has been shown to have anti-apoptotic activity. The tBAX proteins are used to treat diseases associated with neuronal management of the second of the terminal contains.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Key
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Human BAX alpha protein.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 31-JUL-2000
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Domain

                                                                                                                                                                                                                                                                  The present sequence represents the Bax protein A pro-apoptotic peptide can be derived from the BH3 domain. The peptide is an inducer of formation of a channel for transport of cytochrome C out of intochondria. The peptide induces apoptosis in a cell. The peptide changes the ion selectivity of an anti-apoptotic BCL-2 family member from potassium selective to chloride selective. The specification also describes inhibitors of apoptosis in cells The inhibitors and inducers can be used to treat patients, preferably humans with a condition mediated by excessive down-regulation of apoptosis, especially conditions chosen from neoplasias, diseases caused by posterin Barr virus, African swine fever virus and adenovirus, lymphoproliferative conditions, cancer, arthritis, Crohn's disease, lymphoproliferative conditions, cancer, arthritis, Crohn's disease.

                                                                                                                                                                                                                                                                                       The present invention relates to a method of modulating apoptosis of a cell. The method comprises administrating to the cell an agent, comprising a BH1 domain or BH2 domain, capable of modulating formation of at least one complex selected from bcl-2:bcl-2 complexes, bcl-2:associated X protein (Bax):Bax complexes, bcl-2:associated X protein (Bax):Bax complexes, bcl-2:associated X protein (Bax):Bax complexes, bcl-2:associated X protein (Bax):Bax complexes, bcl-2:associated X protein (Bax):Bax complexes, bcl-2:associated X protein (Bax):Bax complexes, bcl-2:associated X protein (Bax):Bax complexes, bcl-2:associated X protein (Bax):Bax complexes, bcl-2:associated X protein (Bax):Bax complexes, bcl-2:associated X protein (Bax):Bax complexes, bcl-2:associated X protein (Bax):Bax complexes, bcl-2:associated X protein (Bax):Bax complexes, bcl-2:associated X protein (Bax):Bax complexes, bcl-2:associated X protein (Bax):Bax complexes, bcl-2:associated X protein (Bax):Bax complexes, bcl-2:associated X protein (Bax):Bax complexes, bcl-2:associated X protein (Bax):Bax complexes, bcl-2:associated X protein (Bax):Bax complexes, bcl-2:associated X protein (Bax):Bax complexes, bcl-2:associated X protein (Bax):Bax complexes, bcl-2:associated X protein (Bax):Bax complexes, bcl-2:associated X protein (Bax):Bax complexes, bcl-2:associated X protein (Bax):Bax complexes, bcl-2:associated X protein (Bax):Bax complexes, bcl-2:associated X protein (Bax):Bax complexes, bcl-2:associated X protein (Bax):Bax complexes, bcl-2:associated X protein (Bax):Bax complexes, bcl-2:associated X protein (Bax):Bax complexes, bcl-2:associated X protein (Bax):Bax complexes, bcl-2:associated X protein (Bax):Bax complexes, bcl-2:associated X protein (Bax):Bax complexes, bcl-2:associated X protein (Bax):Bax complexes, bcl-2:associated X protein (Bax):Bax complexes, bcl-2:associated X protein (Bax):Bax complexes, bcl-2:associated X protein (Bax):Bax complexes, bcl-2:associated X protein (Bax):Bax complexes, bcl-2:associated X protein (Bax):Bax complexes, bcl
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                10-NOV-1994;
